

Critical condition

Despite the signed reconciliation between Fatah and Hamas, lack of coordination between the Palestinian governments in Gaza and the West Bank continues to have a disastrous effect on the availability of health services for 1.5 million people living under blockade.

A total of 178 types of medications and 123 types of medical supplies have already run out and others have reached their expiration date, forcing the Gaza health ministry to take emergency measures. Surgeries

have been cancelled or delayed indefinitely while basic health services like dentistry and outpatient clinics have been suspended.

The possibility of an impending health crisis was originally raised last February when supplies started running out without being replaced by the health ministry in Ramallah, which is responsible for procuring and coordinating the shipment of all necessary medical supplies to Gaza's health facilities. Health authorities and human rights groups are now calling for immediate action to restock and sustain coordinated transfers of essential medical supplies.

Oxfam partners Palestinian Centre for Human Rights (PCHR) and Al Mezan have requested urgent intervention before the situation deteriorates further. In a plea to the Ramallah-based ministry and to the Palestinian president to intervene to solve the pending crisis, PCHR called upon the Palestinian President and the prime minister in Ramallah to investigate thoroughly the reasons for the obstructed supply of medications that had already been approved in accordance with the budget of the Ramallah-based health ministry-- and to hold those responsible accountable.

On Monday evening, it was reported that the Ramallah-based health authorities had coordinated with Israel to transfer medical supplies to Gaza in an emergency shipment covering 130 types of medical and surgical items and 81 different medicines. According to reports, Egypt's union of doctors had also provided 19 types of vital medications to be sent to Gaza hospitals via Rafah border crossing, which is not equipped to transfer goods in bulk, but has been used infrequently to transfer emergency supplies of medicines in the past.

Meanwhile the International Red Cross declared it was donating its stockpiled medications to Gaza's public hospitals, but also called on health authorities to act to solve the crisis.

PCHR reported that various hospital departments have been affected over the past few weeks, including intensive care, nurseries for premature infants, operation rooms, anesthesia and recovery, emergency, cardiac catheterization, hematology and oncology, nephritic diseases. and paediatrics. With many patients still waiting for treatment, the Gaza health ministry is also contracting out services in some primary health care centres and hospitals as the emergency unfolds.

1. Headlines

- **Mortars/rockets/casualties/incursions:** There were no reports of the Israeli military carrying out any incursions or airstrikes this week. There was 1 incursion by Israeli forces reported the week before.

There were no reports this week or last week of Palestinian armed groups firing rockets or mortars towards Israel.

1 Palestinian civilian was reported injured as a result of Israeli military activity this week (see Palestinians in the access restricted area section below). Last week, there was a report of 1 civilian injured in the access restricted area and 1 civilian, a fisherman, was reported to have been lost at sea as a result of Israeli military activity.

No injuries or fatalities were reported amongst Palestinian militants this week or last week.

There were no reports of casualties or injuries to Israeli civilians or soldiers this week or the week before.

- **Fishermen:** There were no reports of Israeli naval vessels opening fire on Palestinian fisherman this week. Last week, there was 1 report of an Israeli naval vessel opening fire on Palestinian fishermen and 1 report of an Israeli naval vessel ramming a Palestinian fishing boat, causing it to capsize, with 1 fisherman on board reportedly lost at sea.

Since January 2009, Israeli naval forces have restricted the access of Palestinian fishing boats to three nautical miles from the coast; in practice, access is sometimes restricted to as little as one nautical mile, banning access to around 85% of Gaza's fishing water. In 2010, the annual fishing catch from Gaza decreased by 45% as compared to the 2008 fishing catch before fishing space was restricted to three nautical miles.

- **Tunnel related fatalities:** There were 2 tunnel related fatalities reported this week. A 23 year old Palestinian worker was reportedly killed when a tunnel beneath the border between Egypt and Gaza collapsed this week, and a 22-year-old Palestinian worker was reportedly electrocuted in a separate tunnel related accident. No tunnel related injuries or fatalities were reported last week.

In 2010, 43 Palestinian workers, including 5 children, reportedly died in tunnel related accidents and another 88, including 1 child, were reportedly injured.

- **Palestinians in the access restricted area (the so-called "buffer zone"):** There was 1 incident reported this week of the Israeli military opening fire on more than 70 civilians who had reportedly gathered 300 metres from the perimeter in the north of Gaza to protest the Israeli imposition of the "buffer zone," with 1 civilian reportedly injured. Last week there was also 1 report of the Israeli military opening fire on civilians in the access restricted area, resulting in 1 reported injury.

Israel first imposed a 150 metre-wide security 'buffer' within Gaza's perimeter in 2000. In certain areas along the northern and eastern perimeters, this official buffer extends up to 500 metres into Gaza. In practice, Israel restricts access to agricultural land up to 1,000-1,500 metres from the fence, which accounts for more than 30% of Gaza's agricultural land and a

significant number of water wells. Most of the Gaza Strip's animal production is also concentrated in this area.

- **Rafah border crossing:** The Rafah border crossing was fully open 3 days and partially open in one direction for Palestinians returning to Gaza from Egypt for another 3 days this week. During the time that Rafah was fully or partially open this week, there were reports of 2,208 Palestinians entering Gaza from Egypt, 1,317 Palestinians leaving Gaza for Egypt, and 174 Palestinians denied entry to Egypt. Last week, the Rafah border crossing was open 6 out of 7 days, with reports of 2,405 Palestinians entering Gaza from Egypt, 2,364 Palestinians leaving Gaza for Egypt, and 249 denied entry to Egypt.

On May 28, 2011, the Egyptian authorities announced that they had permanently opened Rafah border crossing for the movement of people between Gaza and Egypt. During the first official week of opening, Egyptian officials had reported being overwhelmed by the volume of Palestinians from Gaza attempting to use Rafah border crossing, which had resulted in some delays. Hamas officials had also reported that the Egyptian procedures for transferring travelers from one side to the other were not clear.

Since then, there have been reports that Palestinians using Rafah border crossing still need to obtain an Israeli security clearance before being able to cross into Egypt. This policy would negate prior Egyptian announcements that no restrictions on the use of Rafah border crossing would apply to women, children, or men over the age 40, and that only men between the ages of 18 and 40 would need security clearance before traveling to Egypt.

Although Rafah border crossing does not ease movement restrictions to and between Gaza, Israel, and the West Bank, a full and consistent opening of Rafah border crossing would offer Palestinians in Gaza an opportunity to travel abroad for higher education opportunities, medical treatment, or to take a personal holiday.

After Israel's withdrawal from Gaza in 2005, the Palestinian Authority was made responsible for running the Palestinian side of the Rafah border crossing, with the European Union Border Assistance Mission (EUBAM) designated to monitor both Palestinian and Egyptian management of the border crossing. However, citing security concerns, Israel ordered the crossing closed in 2006. As the Israeli blockade of the Gaza Strip officially started in 2007, Egyptian officials kept the Rafah border crossing closed. Since the border crossing has remained closed, only the limited movement of people- foreign passport holders and Palestinians from Gaza who have been cleared by Israeli security- has been allowed.

An estimated 500 people rely on the Rafah border crossing every month to reach scheduled or ongoing medical treatment in Egypt or abroad.

- **Power plant and electricity supply:** There were no reports of additional disruptions to power supplies in Gaza due to blockade related issues or Israeli military activity this week or last week.

Since January 5th, Gaza's power plant has not placed an order for industrial fuel to be transferred from Israel. The fuel for Gaza's power plant is now being supplied through the tunnels underneath the Gaza-Egypt border in the form of Egyptian diesel, at a much lower price than the industrial fuel supplied from Israel.

OCHA estimates that the power plant is buying between 300,000 and 400,000 litres of diesel from the tunnels every day. In addition to what is procured daily from the tunnels, the power

plant in Gaza now reportedly has a back up supply of fuel, capable of running the plant at an output of 60 Mw for one month.

- **Cooking gas:** 400 tons of cooking gas reportedly entered Gaza this week via the Kerem Shalom crossing, as compared to 513 tons of cooking gas reported to have entered Gaza the week before. The 400 tons of cooking gas entering Gaza this week represent 22 percent of the 1,750 tons of cooking gas needed weekly. The overall cooking gas shortage has been a main concern for humanitarian agencies since November 2009. Cooking gas cannot safely be transported through the tunnels beneath the Gaza-Egypt border as it is highly combustible and requires a special pipeline to transport in bulk. The one tunnel equipped with a cooking gas pipeline was reportedly destroyed in an Israeli airstrike in December 2010. Although this tunnel started functioning again in February, it was damaged soon after and is now used irregularly to transport limited quantities of cooking gas. The Gas Station Owner's Association has indicated that of the 28 gas stations that supply cooking gas, only between 10 and 15 are operational due to the overall shortage. As gas stations are unable to meet the local demand for cooking gas, a rationing system remains in place.
- **Diesel/petrol:** No diesel or benzine was reported to have been delivered to the private sector this week or last week. A near total ban on fuel imports for public sale was put in place by the Government of Israel in October 2008. Around 600,000 litres of diesel and 200,000 litres of petrol for public sale are reported to enter Gaza every day through tunnels under the Gaza-Egypt border (OCHA, January 2011).
- **Exports:** No exports were reported to have left Gaza this week or the week before. Since 2007, and despite Israeli government promises this past December to make additional efforts to increase exports from Gaza, exports have to date been entirely agricultural in nature, contributing to the de-development of Gaza's private sector. According to UNRWA calculations, before the blockade, 90 percent of garments, 76 percent of furniture products and 20 percent of food products produced in Gaza were marketed to the West Bank and Israel.

The limited exports now leaving Gaza are allowed as a result of an agreement between Israel and the Netherlands permitting limited exports of seasonal agricultural items. The agreement resumed on 28 November 2010.

**Pre-blockade weekly average (490 truckloads) is calculated on the daily average of all truckloads that exited Gaza between January 2005 and mid June 2007, before Israel's imposition of the blockade.*

- **Truckloads of supplies:** Due to an official holiday in Israel, the Kerem Shalom crossing was only open 3 out of 7 days this week. During the 3 days that Kerem Shalom was open this week, there were reports of 742 truckloads of supplies entering Gaza, representing 26 percent of the pre-blockade weekly average. Last week, the Kerem Shalom crossing was open 5 out of 7 days, with a total of 1,266 truckloads of supplies entering Gaza, representing 42 percent of the pre-blockade weekly average.**

Following the permanent closure of Karni crossing in early March, Kerem Shalom is now the sole permanent crossing through which goods enter Gaza. While Karni could accommodate up to 1,000 trucks a day, Kerem Shalom can only accommodate around 250 trucks per day. UNRWA has referred to the Kerem Shalom crossing, located in the deep south of Gaza, as an inefficient bottleneck that adds 20 percent in transport and labor costs to the price of humanitarian goods. Kerem Shalom crossing is also not equipped to handle the bulk transfer of large quantities of wheat and animal feed, while Karni is.

Kerem Shalom crossing is also not yet equipped to handle the bulk transfer of construction materials. While the Sufa crossing was initially opened temporarily to allow for the transfer of construction materials (aggregates) to humanitarian agencies involved in building projects, such as UNRWA, USAID, and UNDP, the Sufa crossing has now remained closed since March 30th. Although aggregates are now being transferred under a back-to-back system at Kerem Shalom, the quantity of aggregates being transferred is not enough to make up for past shortages and delays. As a result, rehabilitation and building projects are still behind schedule.

While imports remain limited, and raw materials severely restricted, exports remain banned almost entirely except for limited truckloads of strawberries, carnations and cherry tomatoes exported to the Netherlands. As a result, the scale of economic activity remains heavily dependent on local demand in Gaza, which in turn is constrained by the low purchasing power of the population and the relatively small size of the local market. Until crossings are fully opened for export, the impact of the easing of the blockade on unemployment, poverty and food insecurity rates remains limited.

***Pre-blockade weekly average (2,807 truckloads) is calculated based on the monthly average of all truckloads that entered during the first five months of 2007, before Israel's imposition of the blockade.*

2. Humanitarian trucks (week):

Truck originator	Total for week 5 June- 11 June
Bulk grains (human and animal)	92
Aggregates (for UNRWA, USAID, and UNDP)	78
UNRWA	98
ANERA	7
Water Utility	8
Commercial	408
Total trucks for the week	742
Percentage of pre blockade average (first 5 months of 2007)	26 %
