

**First 'Cast Lead' compensation from Israel to family in Gaza**

The Israel military has agreed to compensate the family of two Palestinian civilians killed during Operation Cast Lead in the first settlement reached of this kind since the ceasefire between Israel and Hamas was declared two and a half years ago.

Oxfam partner Palestinian Centre for Human Rights (PCHR) negotiated the compensation agreement on behalf of the family of a mother and daughter who were reportedly killed by Israeli fire during the ground incursion on 4 January 2009. The Israeli military agreed to compensate the family of Raya Abu Hajjaj, 64 and her daughter Majda, 37, the total of NIS 500,000 (around US\$ 147,000) in return for closing the family's wrongful death claim against the Israeli military.

The Abu Hajjaj family lives in Juhor Al Deek, an agricultural village that was heavily hit during Operation Cast Lead. Juhor Al Deek is located in Gaza's middle area along the perimeter with Israel and just outside the access restricted area known as the 'buffer zone.'

According to Yousef Abu Hajjaj (pictured here with his children) one of Raya's five children and Majda's brother, the two were killed by Israeli gunfire while attempting to reach their neighbours' home after their own home had reportedly been struck by an Israeli shell.

Whether caught in the crossfire or directly targeted, civilians worldwide too often suffer as a result of military conflict. Under international law, all parties to a conflict have a responsibility to take every possible measure to ensure the protection of civilians. The protection of civilians extends to closed military zones such as the access restricted area in Gaza.

Mohammed EL Alami, a lawyer working with PCHR's Legal Unit, said the Al Hajjaj's case was among 1,000 presented by PCHR to the Israeli Minister of Justice. He said the settlement is an important precedent, particularly in light of the ongoing situation for people who live in or just outside the access restricted area in Gaza.

"These are farmers who till today are facing daily incursions on their land in the buffer zone," he said.

- **Mortars/rockets/casualties/incursions:** There were reports that the Israeli military carried out 3 incursions across the perimeter into Gaza this week. Last week, there were reports that the Israeli military carried out 11 air strikes and 2 shellings.

There were reports this week of Palestinian militants firing 6 mortars, 5 home made rockets (HMR), and 1 Qassam rocket towards Israel or Israeli forces, as compared to the 2 home made rockets (HMR), 3 Grad rockets, and 1 Qassam rocket fired the week before.

There were reports that 1 Palestinian civilian was injured this week as a result of an Israeli military operation (see below under Palestinians in the access restricted area). Last week, 2 Palestinian civilians were reportedly injured.

There were no reports of injuries or fatalities amongst Palestinian militants this week or last week.

No Israeli civilians or soldiers were reported injured this week. It was reported that 1 Israeli civilian was injured last week as a result of Palestinian militant activity.

Since January 23, 2011, Oxfam calculates there have been 24 Palestinian civilians reportedly killed, 258 Palestinian civilians reportedly injured, 20 Palestinian militants (including Hamas officers) reportedly killed and 32 militants reportedly injured as a result of Israeli military activity. There have also been reports of 1 Israeli civilian reportedly killed, 2 Israeli civilians reportedly injured and 4 Israeli soldiers reportedly injured as a result of Palestinian militant activity during the same reporting period.

- **Fishermen:** There was 1 report of an Israeli naval vessel opening fire on Palestinian fisherman this week, with no injuries reported. There were no reports of Israeli naval vessels opening fire on Palestinian fishermen last week.

Since January 23, 2011, Oxfam calculates there have been 45 reports of Israeli naval vessels opening fire on Palestinian fisherman, with reports of 1 fisherman injured and 1 lost at sea. Since January 2009, Israeli naval forces have restricted the access of Palestinian fishing boats to three nautical miles from the coast; in practice, access is sometimes restricted to as little as one nautical mile, banning access to around 85% of Gaza's fishing water. In 2010, the annual fishing catch from Gaza decreased by 45% as compared to the 2008 fishing catch before fishing space was restricted to three nautical miles.

- **Tunnel related fatalities:** There were no tunnel related injuries or fatalities reported this week or last week.

In 2010, 43 Palestinian workers, including 5 child labourers, reportedly died in tunnel related accidents and another 88, including 1 child labourer, were reportedly injured.

- **Palestinians in the access restricted area (the so-called "buffer zone"):** There was 1 report of the Israeli military opening fire on a group of Palestinian farmers this week, with 1 injury reported. There were no reports of the Israeli military opening fire on Palestinian civilians in the access restricted area last week.

Since January 23, 2011, Oxfam calculates there have been 55 reports of the Israeli military opening fire on civilians in the buffer zone, with 8 civilians reportedly killed and 33 others reportedly injured. In 2000, Israel first imposed a 150 metre-wide security 'buffer' within Gaza's perimeter. In certain areas along the northern and eastern perimeters, this official buffer

extends up to 500 metres into Gaza. In practice, Israel restricts access to agricultural land up to 1,000-1,500 metres from the fence, which accounts for more than 30% of Gaza's agricultural land and a significant number of water wells. Most of the Gaza Strip's animal production is also concentrated in this area.

- **Rafah border crossing:** The Rafah border crossing was open 6 out of 7 days this week, with reports of 3,022 Palestinians entering Gaza from Egypt, 3,697 Palestinians leaving Gaza for Egypt, and 54 denied entry to Egypt. Last week, the Rafah border crossing was also open 6 days with reports of 2,264 Palestinians entering Gaza from Egypt, 3,656 Palestinians leaving Gaza for Egypt, and 183 Palestinians denied entry to Egypt.

On May 28, 2011, the Egyptian authorities announced that they had permanently opened Rafah border crossing for the movement of people between Gaza and Egypt. During the first official week of opening, Egyptian officials had reported being overwhelmed by the volume of Palestinians from Gaza attempting to use Rafah border crossing, which had resulted in some delays. Hamas officials had also reported that the Egyptian procedures for transferring travelers from one side to the other were not clear.

Although Rafah border crossing does not ease movement restrictions between Gaza, Israel, and the West Bank, a full and consistent opening of Rafah border crossing would offer Palestinians in Gaza an opportunity to travel abroad for higher education opportunities, medical treatment, or to take a personal holiday.

An estimated 500 people rely on the Rafah border crossing every month to reach scheduled or ongoing medical treatment in Egypt or abroad.

- **Power plant and electricity supply:** Since January 5<sup>th</sup>, 2011, Gaza's power plant has not placed an order for industrial fuel to be transferred from Israel. The fuel for Gaza's power plant is now being supplied through the tunnels underneath the Gaza-Egypt border in the form of Egyptian diesel, at a much lower price than the industrial fuel supplied from Israel.

OCHA estimates that the power plant is buying between 300,000 and 400,000 litres of diesel from the tunnels every day. In addition to what is procured daily from the tunnels, the power plant in Gaza now reportedly has a back up supply of fuel, capable of running the plant at an output of 60 Mw for one month.

- **Cooking gas:** 830 tons of cooking gas reportedly entered Gaza this week via the Kerem Shalom crossing, as compared to 887 tons of cooking gas reported to have entered Gaza the week before. The 830 tons of cooking gas entering Gaza this week represents 47 percent of the 1,750 tons of cooking gas needed weekly. The overall cooking gas shortage has been a main concern for humanitarian agencies since November 2009. Cooking gas cannot safely be transported through the tunnels beneath the Gaza-Egypt border as it is highly combustible and requires a special pipeline to transport in bulk. The one tunnel equipped with a cooking gas pipeline was reportedly destroyed in an Israeli air strike in December 2010. Although this tunnel started functioning again in February, it was damaged soon after and is now used irregularly to transport limited quantities of cooking gas. The ongoing shortage has created huge demand for cooking gas in the local market. The Gas Station Owners' Association has indicated that of the 28 gas stations that supply cooking gas, only between 10 and 15 are operational due to the overall shortage. As gas stations are unable to meet the local demand for cooking gas, a rationing system remains in place, with customers reporting a waiting time to refill of over 1 month.

*This update is compiled by Oxfam International from the best available information drawn from reliable international sources. Some of the information is preliminary and may be updated in subsequent reports.*

- **Diesel/petrol:** No diesel or benzine was reported to have been delivered to the private sector this week or last week. A near total ban on fuel imports for public sale was put in place by the Government of Israel in October 2008. Around 600,000 litres of diesel and 200,000 litres of petrol for public sale are reported to enter Gaza every day through tunnels under the Gaza-Egypt border (OCHA, January 2011).
- **Exports:** No exports were reported to have left Gaza this week or the week before. The last truckload of exports to exit Gaza via the Kerem Shalom crossing was 1 truckload of flowers reported to be destined for the Netherlands on May 13, 2011.

Since 2007, and despite Israeli government promises this past December to make additional efforts to increase exports from Gaza, exports have to date been entirely agricultural in nature, contributing to the de-development of Gaza's private sector. According to UNRWA calculations, before the blockade, 90 percent of garments, 76 percent of furniture products and 20 percent of food products produced in Gaza were marketed to the West Bank and Israel.

The limited exports now leaving Gaza are allowed as a result of an agreement between Israel and the Netherlands permitting limited exports of seasonal agricultural items. The agreement resumed on 28 November 2010.

*\*Pre-blockade weekly average (490 truckloads) is calculated on the daily average of all truckloads that exited Gaza between January 2005 and mid June 2007, before Israel's imposition of the blockade.*

- **Truckloads of supplies:** Kerem Shalom crossing was open 5 out of 7 days this week, with reports of 1,314 truckloads of supplies entering Gaza, which represents 46 percent of the pre-blockade weekly average.\*\* Last week, Kerem Shalom crossing was also open 5 out of 7 days with reports of 1,410 truckloads of supplies entering Gaza, representing 50 percent of the pre-blockade weekly average.

Following the permanent closure of Karni crossing in early March, Kerem Shalom is now the sole permanent crossing through which goods enter Gaza. While Karni could accommodate up to 1,000 trucks a day, Kerem Shalom can only accommodate around 250 trucks per day. UNRWA has referred to the Kerem Shalom crossing, located in the deep south of Gaza, as an inefficient bottleneck that adds 20 percent in transport and labour costs to the price of humanitarian goods. Kerem Shalom crossing is also not equipped to handle the bulk transfer of large quantities of wheat and animal feed, while Karni is.

While imports remain limited, and raw materials severely restricted, exports remain banned almost entirely except for limited truckloads of strawberries, carnations and cherry tomatoes exported to the Netherlands. As a result, the scale of economic activity remains heavily dependent on local demand in Gaza, which in turn is constrained by the low purchasing power of the population and the relatively small size of the local market. Until crossings are fully opened for export, the impact of the easing of the blockade on unemployment, poverty and food insecurity rates remains limited.

*\*\*Pre-blockade weekly average (2,807 truckloads) is calculated based on the monthly average of all truckloads that entered during the first five months of 2007, before Israel's imposition of the blockade.*
